Professional Summary

Finance Data Engineer with 5+ years of experience designing, building, and maintaining data interfaces, pipelines, and data products that power financial reporting, analytics, and business decision-making. Proven ability to work cross-functionally with business users, data scientists, software engineers, and IS&T teams to identify, capture, collect, load, and format financial data from external sources, internal systems, and enterprise data warehouses. Strong proficiency in Python and SQL — with hands-on experience building ETL/ELT pipelines, developing RESTful API integrations, and delivering feature-ready datasets for downstream analytics and product consumption. Experienced across AWS (S3, Redshift, Glue), Snowflake, and cloud-native data architectures. Deep appreciation for data quality and validation in every pipeline, with a track record of delivering reliable, accurate, and architecturally sound data solutions aligned to finance business processes.

Education

Kent State University

May 2021

Master of Science, Computer Science - Specialization in Data Analytics | Kent, OH

Visvesvaraya Technological University

August 2018

Bachelor of Information Science and Technology - Information Technology

Technical Skills

Programming & Scripting: Python, SQL, T-SQL, PySpark, RESTful API Development & Integration, Shell Scripting (familiarity)

Data Pipelines & ETL/ELT: ETL/ELT Pipeline Design & Development, Azure Data Factory, SSIS, Airflow, DBT, CDC, Informatica, Data Ingestion & Transformation

Cloud & Data Platforms: AWS (S3, Redshift, Glue, Lambda), Snowflake, Azure, GCP, Cloud-Native Data Architecture, Lakehouse concepts

Data Warehousing & Modeling: Enterprise Data Warehousing, Dimensional Modeling, Schema Design, SQL Server (SSMS), MySQL, PostgreSQL, Feature-Ready Dataset Development

Data Quality & Governance: Data Quality & Validation, Data Testing, Pipeline Monitoring & Alerting, Data Governance, Data Accuracy & Integrity

DevOps & CI/CD: Git, CI/CD Pipelines (Jenkins), Azure DevOps, Version Control, Agile/Scrum, SDLC

BI & Reporting: Tableau, Power BI, Amazon QuickSight, Advanced Excel (VLOOKUP, Pivot Tables, Power Query)

AI Tools: Claude (Anthropic), ChatGPT - actively leveraged for productivity, code generation, data analysis, and documentation

Professional Experience

Pinnacle Group | Data Engineer

February 2023 - May 2026

Dallas, TX

- Worked closely with business users, data scientists, software engineers, and cross-functional teams to identify, capture, collect, load, and format financial data from external sources, internal systems, and enterprise data warehouses — delivering reliable, accurate, and architecturally sound data interfaces and pipelines for enterprise clients including Amazon, Regions Bank, and AT&T.
- Designed, built, and maintained data pipelines and ingestion processes using Python, SQL, SSIS, and Azure Data Factory — developing, testing, deploying, monitoring, and troubleshooting feature-ready datasets for downstream analytics and reporting consumption.
- Developed and maintained RESTful API integrations for data ingestion and exchange — handling authentication, schema parsing, and payload manipulation to operationalize data flows across enterprise platforms.
- Built and optimized ETL/ELT pipelines on AWS (S3, Glue, Redshift) and Snowflake — delivering cloud-native data solutions that enabled finance teams to leverage trusted, scalable data for business decision-making, improving pipeline performance by 50% and reducing failures by 30%.
- Led migration of on-premise financial data systems to AWS cloud infrastructure — re-engineering pipelines, schemas, and data interfaces to align with modern lakehouse and cloud-first data architecture.
- Ensured data quality and validation in every pipeline — implementing automated testing, monitoring, alerting, and CDC processes to maintain data accuracy and integrity across all financial data workflows.

- Used Python to automate data workflows, reduce manual processing, and implement data and automation services via RESTful interfaces across enterprise data platforms.
- Collaborated with architects, product teams, and business stakeholders to translate finance use cases into data requirements, schemas, and retrieval patterns — contributing to best practices for data acquisition, transformation, storage, and analytics consumption.
- Contributed to technical documentation, code repositories, and CI/CD pipelines using Git and Azure DevOps — maintaining version control and deployment integrity across development and production environments.

Tata Consultancy Services | Data Analyst
Cleveland, OH

November 2021 - February 2023

- Worked with business users and data teams to identify, capture, and load financial data from multiple internal and external sources into the enterprise data warehouse for client Pentagon Federal Credit Union — supporting M&A data integration and downstream analytics consumption.
- Developed, tested, and maintained ETL/ELT workflows using Python, SQL, and SSIS — delivering feature-ready datasets for financial reporting, analytics, and business decision-making.
- Applied data quality and validation processes across all pipelines — ensuring accuracy, completeness, and consistency of financial data for downstream reporting and analytics teams.
- Used Python for programmatic data analysis, anomaly investigation, and validation of large financial datasets — connecting findings back to business questions and supporting data-driven decisions.
- Collaborated with data scientists, engineers, and business stakeholders to translate finance use cases into data requirements and scalable pipeline solutions.
- Developed Power BI and Tableau dashboards to surface validated financial datasets as actionable insights for business leaders and cross-functional stakeholders.
- Maintained technical documentation for data transformation logic, pipeline architecture, and business rules to support governance and team knowledge sharing.

Wipro Technologies | Project Engineer
Bangalore, India

August 2018 - July 2019

- Developed SQL queries, stored procedures, and database views to support enterprise data analysis and reporting for production systems.
- Analyzed performance-related data and metrics; identified optimization opportunities and supported troubleshooting and issue resolution.
- Collaborated with business and technical teams to support data accuracy, reporting requirements, and production support activities.

Certifications

Google: Introduction to AI Agents | DataCamp | Jun 2026

Understanding Microsoft Azure | DataCamp | Jun 2026

Introduction to Business Analytics | Tableau Learning Partner (Coursera) | Jun 2026

Learn MSBI, SSIS, SSRS and SSAS Step by Step | Udemy | Jul 2022

Research & Publications

Third IEEE International Conference (RTEICT) | Presenter
Bangalore, India

January 2018 - June 2018

- Presented research paper titled "A Novel Approach to Detect Acute Lymphoblastic Leukemia".
- Paper published in IEEE on February 27, 2020 (ISBN: 978-1-5386-2440-1). Available at: <https://ieeexplore.ieee.org/document/9012461>

*Proposed and implemented an automated image processing pipeline in MATLAB for early-stage detection of Acute Lymphoblastic Leukemia (ALL) using digital blood smear images from the ALL-IDB dataset (University of Milano, Italy). The system applied colour-based thresholding for white blood cell detection, L*a*b colour space segmentation to isolate nuclei and cytoplasm, and Watershed Transform algorithms to separate adjoining cells. Lymphoblasts were identified by computing the roundness of each nucleus and applying area thresholds - flagging a patient as ALL-positive when two or more lymphoblasts were detected. The proposed method achieved 92.15% accuracy, 96.92% sensitivity, 85.29% specificity, 91.35% precision, and an F-Measure of 94.06%, demonstrating strong potential for a low-cost, portable diagnostic prototype for early cancer detection.*
